BRIJESH RATH

Bhubaneswar, Odisha, India| +91-8327720362

LinkedIn | rathbrijesh2006@gmail.com

Summary

Results-driven **Software Developer** with expertise in **AI/ML**, backend development, and **Agentic AI systems**. Skilled in building scalable applications, multi-agent workflows using **LangChain** and **LangGraph**, and real time data-driven solutions. Experienced in **REST API development** and deploying applications on **Google Cloud Platform(GCP)** with automations. Passionate about designing intelligent systems and solving complex real-world problems using modern engineering practices.

Education

B.Tech in Computer Science & Engineering — **CGPA: 8.5/10 (till 3rd Sem)**
GITA Autonomous College, Bhubaneswar — *2024 – 2028*

Higher Secondary (+2 Science) — **75%**
KMBB Higher Secondary School, Cuttack — *2024*

Skills

Programming Languages: C, Python, HTML, CSS, MATLAB, SQL
Frameworks & Libraries: Flask, NumPy, Pandas, Seaborn Tensorflow, Keras, Open-CV, LangChain, LangGraph
Databases: MySQL, MongoDB, VectorDB
Dev Tools: GitHub Actions, Git, Docker, GCP
Key Strengths: Backend Engineering, ML Model Engineering, Database Optimization, Problem Solving

Experience

Software Development Intern — **Aug 2025 – Jan 2026**
Infosys Springboard (Remote) — *Artificial Intelligence and Machine Leraning*

- Designed and developed an end-to end AI Powered Facial Skin Aging detection system using TensorFlow, Keras implementing MobileNetV2 for multiclass classification of Wrinkles, Dark Spots, Puffy Eyes and Clear Skin.
- Integrated a robust data including dataset cleaning, augmentation, normalization and one-hot-encoding, improving model accuracy and reducing overfittings.
- Performed end-to-end testing, optimization and UI backend integration achieving <5sec per image inference time and high confidence prediction results across diverse facial images.

Projects

DermalScan – AI Facial Skin Aging Detection System (GitHub)
- Developed an AI-Powered facial skin analysis system using CNNs to detect indicators such as wrinkles, dark spots, and skin clarity.
- Built an end-to-end pipeline including face detection, preprocessing, classification, confidence scoring, and age estimations.
- Designed a Flask-based web interface for image upload, real-time interface, and visualizations of annotated results.

AI-Based Early Warning System for Shipment Delays (GitHub)
- Developed an AI-powered early warning system to predict shipments delays 48-72 hours in advance using logistics, weather, and traffic data.
- Also built a smart rerouting and recommendation engine to dynamically optimize delivery paths and handle real-time address changes.
- Improved delivery reliability and SLA compliances through proactive alerts, risk scoring, and automated intervention strategies.

Multi-Agent AI System for Intelligent Workflow Automation (GitHub)
- Developed an Agentic AI multi-agent system using LangChain and LangGraph for orchestrating complex, task-driven workflows.
- Implemented intelligent agents with dynamic tasks routing, memory management, and tools integrations for context-aware decision making.
- Built a scalable pipeline enabling real-time automations, efficient inter-agent communications, and end-to-end workflow execution.
- Designed a graph-based agent orchestration system using LangGraph, enabling parallel execution, fault tolerant workflows, and efficient handling of complex multi-step tasks in real time.

Awards & Achievements

- **AI Project Recognition (2025):** Recognized for developing AI-based systems using Python and real-time data processing.
- **Multi-Agent System Development (2025):** Built and deployed a multi-agent Agentic AI system using LangChain and LangGraph.
- **Cloud Deployment Experience:** Implemented scalable applications on Google Cloud Platform (GCP) with CI/CD pipelines.
- **Open Source & Technical Contributions:** Contributed to backend and AI projects improving system performance and modular design.
- **Real-world Problem Solving:** Developed real-world solutions for shipment delay prediction and workflow automation.
- **Technical Skill Advancement:** Continuously upskilling in Python, AI/ML, and system design through hands-on projects.
- **Top Performer** – Google Cloud Skill Boost (2025)
